AI Voice Agent - Coda

Pricing & Packages

Prepared by: Electro Pi
Date: 18 August 2026

$0.09/min	50	$0	Included
Starter — no hidden fees	concurrent users at Scale tier	token fees, ever	model training & version updates

Coda is priced simply: one flat rate per minute, per package. There are no per-token audio or text charges, no separate transcription line item, and no surprise usage fees. Model training and ongoing version updates are included in every package. Custom development — function calling, integrations, and bespoke code — is scoped and quoted separately.

Coda is developed by Eracoda in saudi arabia powered by ElectroPi.

Coda-V2 ranks first on the Arabic TTS Arena leaderboard with 1548 points across 281 head-to-head votes.

Pricing and fees are calculated based on US Version of Coda. for KSA Version of Coda, fees gets doubled as for double infrastructure fees in GCP Dammam.

1. Pricing Packages

All packages bill a single, transparent per-minute rate. The rate steps down as monthly volume and concurrency increase.

Package	Price / minute	Included minutes / month	Concurrent users (up to)	Est. monthly cost
Starter	$0.09	6,000	50	$450
Growth	$0.07	20,000	100	$1,400
Scale	$0.06	50,000	150	$3,000
Enterprise	Custom	100,000+	Custom	Contact us

Estimated monthly cost = price/minute × included minutes. Usage beyond a package's included minutes, or a request to exceed its concurrency cap, moves the account to the next tier. Enterprise pricing (100,000+ minutes/month) is scoped individually — contact us.

2. What's Included

- **Straightforward per-minute pricing — the rate shown is the rate billed. No per-token audio charges, no separate STT/TTS line items, no metered text-generation fees , no live kit fees.**
- Model training included — Coda's underlying models are trained and tuned for your use case at no extra charge.
- Version updates included — ongoing model and platform upgrades are rolled out as part of the package, not billed as a separate maintenance fee.
- Predictable billing — your monthly cost is minutes used × your package rate. Nothing else moves the number.

3. Priced Separately — Custom Development

The packages above cover the core voice-agent service. Work that goes beyond that is scoped and quoted individually:

- Custom function calling and business logic
- Third-party integrations (CRM, calendars, payment systems, helpdesks, etc.)
- Bespoke code and custom workflows

4. Coda vs. ChatGPT Live Audio — Pricing Model

The core commercial difference between Coda and building directly on OpenAI's Realtime API ("ChatGPT live audio") isn't just the headline rate — it's what's included in it. OpenAI bills per audio token, layered with separate rates for text tokens, cached vs. uncached input, and tool/function calls. Coda bills one number per minute.

	Coda	OpenAI Realtime API ("ChatGPT live audio")
Pricing model	Flat $/minute	Per-token: audio in, audio out, text in/out, cache
Starting rate	$0.09/min (Starter)	$32.00 / 1M audio-in tokens, $64.00 / 1M audio-out tokens*
Effective $/min (approx.)	$0.09 → $0.06 by volume	~$0.15/min – $0.29/min
Text tokens	Included	Billed separately ($4.00 / 1M in, $24.00 / 1M out)*
Function / tool calls	Priced separately (scoped)	Billed as additional tokens per call
Model training & updates	Included	Not applicable — no fine-tuning included
Bill predictability	Fixed rate, easy to forecast	Varies with call length, caching, and tool use

5. Recommended Quotation

Subject to confirmation of the Starter-tier figures above:

Item	Detail
